

AGRISCIENCE EDUCATION

Who teaches tomorrow's leaders?

**WE'RE
THE
ONES.**

WHO PREPARES TODAY'S YOUTH FOR TOMORROW'S CHALLENGES?

We know the importance that agriculture plays in building a sustainable world for future generations. We've been preparing young people since before 1870, when The Ohio State University originally opened as the Ohio Agricultural and Mechanical College.

If you're a "people person" who likes to teach others, this major might be a fit for you. Your coursework in this major will prepare you to acquire a license to teach agricultural science in secondary high schools in Ohio and across the country. You'll also find many opportunities in business and government that require strong leadership skills, interpersonal skills and savvy about the agricultural industry. You'll receive extensive training in agricultural science, educational psychology, instructional methods and youth development.

SO WHAT WILL YOU DO?

Visit us, experience Ohio State
for a day and begin your journey!
